SUMMARY

Full-stack software engineer focused on building AI-driven, data-centric applications. Proven ability to design scalable systems, integrate APIs, and deliver high-performance user experiences. Background in sports analytics brings strong problem-solving, attention to detail, and execution under pressure.

TECHNICAL SKILLS

Languages:	JavaScript, Python, SQL, HTML, CSS
Frameworks:	React, Next.js, Tailwind
Tools:	Docker, Vercel, Git
Databases:	PostgreSQL, MySQL
Concepts:	REST APIs, Authentication, Full-Stack Development, Data Modeling

PROJECTS

InciSight (AI Beauty Ingredient Scanner)

- Built AI-powered full-stack app analyzing ingredients with personalized safety insights
- Designed scalable scoring system and database for ingredient classification
- Developed modern UI with Next.js, Tailwind, and responsive design principles

TMDB Full-Stack App

- Built movie platform using Next.js frontend and Flask backend APIs
- Implemented authentication, protected routes, and secure session handling
- Integrated real-time external API data for dynamic content rendering

Fitness Tracking App

- Developed full-stack application for tracking workouts and user performance
- Built REST APIs and relational database models for structured data
- Created responsive UI with dynamic state management

EXPERIENCE

Sports Statistician — Genius Sports | 2024 – Present

- Managed real-time play-by-play data tracking with high accuracy under pressure
- Collaborated with officials to ensure data integrity and consistency

General Manager — Sherwin-Williams | 2011 – 2022

- Increased annual sales by 17% through strategic planning and execution
- Secured 100+ new accounts through targeted business development strategies

EDUCATION

Atlas School — Computer Science & Full-Stack Software Engineering (April 2026)
